

Multi-Protocol USB Host Adapter

Connector Pinout

KEY

- Power (Red)
- GND (Black)
- I²C (Purple)
- SPI (Orange)
- UART (Green)
- Interrupt Capable (Blue)
- Digital IO / Analog Input (Dark Blue)
- Analog Output (Pink)

PWM Capable

- Absolute** MAX per pin 10mA
- GPIO pins rated for 3.3V **Never** connect them to 5V signals
- VBUS** Connected to 5V USB Port **Absolute** MAX 200mA
- 3V3** 3V3 output from regulator **Absolute** MAX 100mA

Pin Name	Pin Number	Pin Function(s)
IO0	1	SDA (I2C), Digital In, Digital Out, Analog In, PWM
IO1	3	Digital In, Digital Out, Analog In, Analog Out, Interrupt
IO2	5	MISO (SPI), SCL (I2C), Digital In, Digital Out, Analog In, Interrupt, PWM
IO3	7	SCK (SPI), RX (UART), Digital In, Digital Out, Analog In, Interrupt, PWM
IO4	9	MOSI (SPI), TX (UART), Digital In, Digital Out, Analog In, Interrupt, PWM
3V3	4	3.3V power rail
5V / V _{USB}	8	V _{USB} (typically 5V) power rail
GND	2, 6, 10	Ground connection

Note: Dallas 1-WIRE and Atmel SWI (Single-Wire Interface) protocol can be configured to work with any of the five IO pins. It is especially convenient to use with IO0 and IO2 as it's possible to engage a suitable internal pull up resistor on these channels
